

ABSTRACT

An electronic device capable of displaying a computer application that allows the use of a method for performing a transaction without the use of spoken communication is disclosed. The method consists of providing at least one digital, transactional flash card displayed on the electronic device having information about the transaction and the transaction goal displayed on it, in text understandable to the user and different text understandable to the party from whom the user wishes to purchase goods or services. The digital, transactional flash cards can have inquiries about price, payment methods, or shipping terms. Also disclosed are the navigational interface for the software application and different display methods.
